

HEROS-matrix: Firefighting helmet for forest fires and rescue operations

With the new HEROS-matrix firefighting helmet, Rosenbauer delivers the ideal helmet for forest fire operations and rescue operations. The new helmet was developed specially for operations other than indoor fires and is therefore the light and economical alternative for fire departments, rescue, and technical relief.

Certified as to:

- prEN 16471:2013 helmets for forest and land firefighting
- prEN 16473:2013 helmets for technical rescue
- ISO 16073 Personal protective equipment for firefighting in outdoor areas

Strong in every operation

The light alternative

The shell of the HEROS-matrix helmet consists of a special material, which is characterized by its high impact resistance and heat resistance. The HEROS comfort padding guaranteed an excellent carrying comfort for long operations and ensures the very low weight of just 970 g (without neck protector and visor).

Easy size adjustment mechanism from outside

The HEROS-matrix is fitted with the practical rotary knob to adjust head width sizes between 51 and 65 cm. So easy size adjustment from outside, also with firefighting gloves, is therefore possible in every operational situation.

Ergonomic trapezoidal chin strap

As standard, the new helmet contains an ergonomic 3-point chin strap made from heat and flame-resistant material. The multi-adjustable trapezoidal chin strap ensures a stable and secure fit in every operation.
