

## FLOATING STRAINER 4"

- ➔ Can be used in shallow water
- ➔ Instant ready for use
- ➔ Light weight

The Solid floating strainer ensures maximum water flow and at the same time prevents mud, pebbles and leaves from being sucked up. Because of the self-floating tube construction this strainer can be operated immediately in shallow water without losing valuable time.

The strainer is made of aluminum making it both lightweight and sturdy. The Stanley® stainless steel hinge with a pin of 6 mm ensures a robust link between the strainer and the floating section. The Solid floating strainer is coated with red RAL 3001 DuPont® powder coating.

The floating strainer can be utilized in divers settings; rivers, canals, ponds, swimming pools, mobile tanks, etc.

The strainer has a 4" BSP male connection and comes standard with a Storz coupling (lug distance 133). All other types of couplings can be supplied. (Camlock, Instantaneous / John Morris, Guillemin, DSP).

## Specifications

➔ Size (L x W x H): 68 x 40 x 28 cm

➔ Weight: 8 kg
