

PORTABLE FOAM UNIT

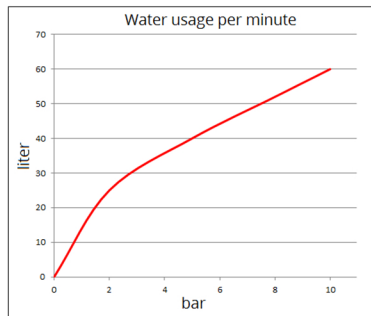

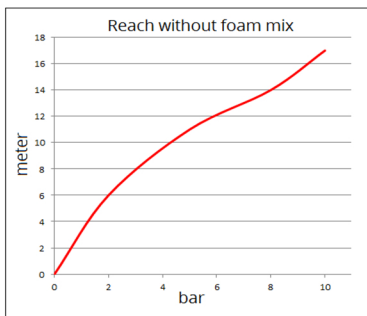

- ➔ Large foam capacity
- ➔ Lightweight design
- ➔ Extensive reach
- ➔ Large fill opening

The Portable Foam Unit (PFU) has been designed to extinguish small and medium fires with the use of foam. The PFU mixes foam concentrate and water; as a result the foam output is multiple compared to regular foam extinguishers. In addition the PFU has a reach of 10 meters making it the safe choice for firefighting.

The PFU can be connected to a hose reel and is also suitable for the use on fire trucks. The large fill opening with a diameter of 50 mm makes it easy to refill the tank with foam concentrate. The PVC base adds additional protection and stability to the design of the PFU.

Optionally an Oetiker coupling or other types of quick connectors can be supplied.

Specifications

- ➔ 11 Liter stainless steel cylinder
- ➔ Working pressure between 2 and 10 bar
- ➔ Suitable for various foam concentrates
- ➔ Connection 1" BSP female thread stainless steel ball valve
- ➔ Empty weight: 4.5 kg
- ➔ Filled weight: 17.5 kg

Specifications at 10 bar and 6% foam mix:

REACH	FOAM	OPERATING TIME
10 meter	166 liter	4 minutes
