

PORTABLE PRIVACY SCREEN

- Quick set up and take down
- Lightweight construction
- Extendible
- Easy cleaning

The Solid portable privacy screen is an essential tool for firefighters, police and emergency services for temporarily shielding the area of an accident or crime scene. This flexible screen with integrated pop-up frame is easy to set up by one person within minutes.

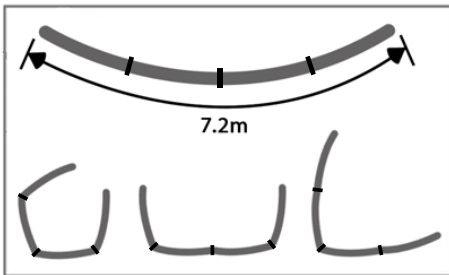

The combination of quality materials and a high-end finish makes the privacy screen the ideal mobile barrier. The PVC screen can be easily cleaned with a damp cloth. Folded the screen takes little space and therefore can be placed in any fire- and rescue vehicle.

The smart design of the Solid portable privacy screen makes it possible to place the barrier into various formations. In order to extend the barrier, multiple screens can be effortlessly linked through the straps that are attached on both sides of the screen.

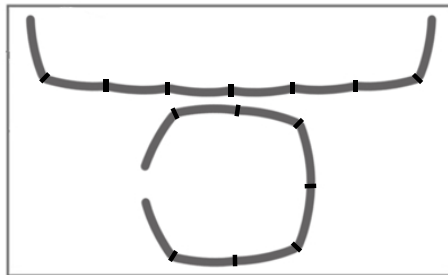

The privacy screen is self-supporting and can be placed in mild wind conditions without extra aids. In windy conditions or uneven terrain the screen can be anchored to the ground using the supplied tent pegs and guy lines.

For the (semi-) permanent placement of the screen we developed a set of 3 rigid supports.
