## **LB4C – Lifting Bag 4 Car**

**Lifting Bag 4 Car** is an inflatable bag that comes in handy at replacing flat tyres of passenger vehicles, SUVs, as well as light commercial vehicles.

**Lifting Bag 4 Car** is a light, compact and robust bag, which is easy to place under a vehicle and is inflated by means of any compressed air source. If compared to a mechanical car lifter, this bag especially excels if the space is limited. The non-inflated bag is less than 5 cm high; without causing any damage it can be easily placed under a vehicle with a flat tyre, as well as under a vehicle with a lowered chassis, or built-in spoilers.

The **Lifting Bag 4 Car** is equipped with an inflation hose with a quick coupling, which enables a safe handling outside of the road surface. Every bag has a safety valve (1bar) installed. For safety reasons, it is allowed to use only one lifting bag at the same time.

The lower and upper parts of the **Lifting Bag 4 Car** are additionally reinforced to provide protection from sharp objects that could cause abrasion or punctures; thanks to this feature, the bag is durable and reliable. The bag proves successful either on hard and soft surfaces such as sand, snow, mud, etc.

Since the bag is small, it can be simply placed in your car boot or even behind a car seat.

### **Technical data LB4C:**

(code: 555624)

- operating pressure: 0.5 bar
- min. burst pressure: 1.5 bar
- installed safety valve: 1 bar
  - bag size: 0.6m x 0.6m
  - max. lifting height: 0.6m
  - bag weight:
- max. lifting load: 1200 kg
- Bag is equipped with an inflation hose
